Washington, DC 20554

Re: Reply Comments; DA 12-1863, IB Docket No. 12-340; RM-11683

Dear Chairman Genachowski:

As an educator, I understand how important it is to incorporate technology into school curriculums, especially access to the internet. By having access to the internet, students are able to instantly gather a wealth of information on practically any subject, as well as connect with individuals across the country and even the world. That's why I feel it is important to pursue new avenues to ensure that reliable access is available to all who need it.

I have been made aware of LightSquared's efforts to build and deploy a mobile broadband network. In following the proceedings, I see a trend in the comments what overwhelmingly support LightSquared's proposal. As national wireless provider America4G stated in their comments, they feel that LightSquared's proposed wholesale business model and network will be able to provide innovative services to the national wireless market. It is our public and economic interest to see to it that our wireless and mobile infrastructure remains viable and strong. Not only will such a network benefit social and business circles, but greater access to internet can have a large positive impact on the way education is received and administered.

In these technology driven times, a successful education requires access to the internet. As students become more aware of the world around them, easy access to information is the best way to fulfill their curiosity. I appreciate your efforts to ensure the availability of a viable broadband spectrum. I hope you will consider LightSquared's proposal and move forward with this exciting venture.

Sincerely,

Nancy Mulvihill
